

Project Executable Files

Date	04 July 2026
Team ID	
Project Name	Rising Waters – A Flood Prediction
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA (CSV Dataset is used)
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

```

Rising_Waters_Project/
|
├─ Dataset/
|   └─ Flood_Prediction_Dataset.csv
|
├─ static/
|   ├── Images/
|   ├── main.css
|   └─ main.js
|
├─ templates/
|   ├── home.html
|   ├── index.html
|   ├── chance.html
|   └─ no_chance.html
|
├─ Flood_Prediction_Code.ipynb
├─ app.py
├─ floods.save
├─ requirements.txt
├─ scaler.pkl
└─ transform.save
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Applicable (Project not deployed)
Login Credentials (Demo)	Not Applicable
Platform / Hosting Provider	Not Applicable
Repository Link	https://github.com/sravya2709/Rising-Waters-Project
Demo Video Link	https://drive.google.com/file/d/1I-5rU-zg7WQNRwIwev_aBHzgyOxik_CQ/view?usp=drivesdk

Step 4: Run Instructions

Pre-requisites

- Windows / Linux / macOS
 - Python 3.8 or above
 - Anaconda Navigator or Jupyter Notebook
 - Flask Framework
 - Required Python libraries (NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Joblib, Flask)
 - Internet connection (only for downloading required packages)
-

Step 1

Download or clone the project repository to your local machine.

Step 2

Open the project folder in Jupyter Notebook PyCharm or Visual Studio Code.

Step 3

Install all required dependencies using:

```
pip install -r requirements.txt
```

Step 4

Ensure that the trained model files (floods.save, scaler.pkl, and transform.save) and dataset are present in the project directory.

Step 5

Run the Flask application using:

```
python app.py
```

Step 6

Open your web browser and visit:

```
http://127.0.0.1:5000/
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of the dataset.	Use a larger and regularly updated dataset to improve model performance.
2	The system predicts flood risk based only on the selected input features.	Additional environmental parameters can be included in future versions.
3	The application runs only on a local machine and is not deployed online.	Future enhancement includes deployment on IBM Cloud or another cloud platform for public access.
